

Safety Use of Ozone Washer

Ozone Health Concern

Consumer appliances that emit ozone in air, either intentionally or as a by-product, may result in potential health effects and can be easily misused. Please click on the following web sites for more information regarding health concerns.

www.cdc.gov/air/ozone.html

Our washer utilizes a pot full of water and then fills with produce and uses lower emissions of ozone. Over shorter duration of use, this generally appears to be inconsequential, as compared to continuously operating products such as portable air cleaners and blowing ozone directly in the air.

Nevertheless, by using the additional following safety feature of the washer, the consumer will now be able to enjoy and take advantage of the many benefits of healthy produce.

Please keep in mind, we do not pump pure ozone directly into air and most ozone has already been absorbed.

Advantages of the Multi-Purpose Washer

1. Use timer to regulate use.
2. Generator can be reactivated in an adjacent room and removed from close proximity to pot filled with produce and water.
3. The small generator can be stored and locked in room away from children.
4. This product is made in the U.S.A.
5. Walking in the room after 15 minutes and since ozone has a short life span, the ozone has dissipated.
6. For people who have specific dietary concerns (fish, meat, dairy), you can use the same generator. Just change the hose and diffuser.
7. An extra advantage of the multi-purpose washer is that you can take it with you when traveling, for example, to a summer home.

How to Prepare Produce

1. When possible, wash dirt and debris from produce before placing in pot.
2. Peel skin from produce when possible.
3. Cut and open to allow ozone to enter, for example, pepper.
4. It is not practical to peel tomatoes or grapes. Just cut and wash.
5. Loosen leaves of lettuce to allow maximum ozone exposure.
6. Place a screen on top of produce to submerge and allow ozone contact.
7. Treat water or have reverse osmosis to lengthen diffuser and life of washer.
